

Features

- MINIATURE SIL PACKAGE
- LOW COST VERSION
- DATA RATES UP TO 40 KBPS
- SINGLE 2.2 TO 10v SUPPLY
- TYPICAL RANGE 300+ m (433.92 MHz Version)
(In conjunction with the R5B receiver)
- 433.92 MHz VERSIONS
- INDUSTRY PIN COMPATIBLE
- EN 300-220 COMPLIANT MODULE

Applications

- VEHICLE ALARM SYSTEMS
- REMOTE GATE CONTROLS
- GARAGE DOOR OPENERS
- DOMESTIC AND COMMERCIAL SECURITY
- WIRELESS TELEMETRY
- REMOTE DATA TRANSFER

Compatible Receiver Modules

- XR5
- XR5B
- XR5LC

General Description

The XT5B miniature transmitter UHF radio module enables the implementation of a simple telemetry link at data rates of up to 40Kbit/s when used with the compatible receiver modules.

The XT5B is fully backward compatible with the XT5B range of shielded transmitters and is fully compliant with EN 300-220.

In conjunction with the XR2FM receiver, a high quality FM link is now available at the lowest price possible.

The XT5B module will suit one-to-one and multi-node wireless links in applications including building and car security, remote industrial process monitoring and computer networking. Because of its small size and low power requirements, this modules is ideal for use in portable battery powered wireless applications.

Ordering Information

Standard Product:

Part No	Description
XT5B-433.92-40	SIL Transmitter 433.92 MHz

Absolute Maximum Ratings: Transmitter

Operating temperature:	-20°C to +55°C
Storage temperature:	-40°C to +100°C
Supply Voltage (pin 3)	12V
Data input (pin 5)	10V
RF Out (pin 2)	±50V @ < 10MHz , +20dBm @ > 10MHz

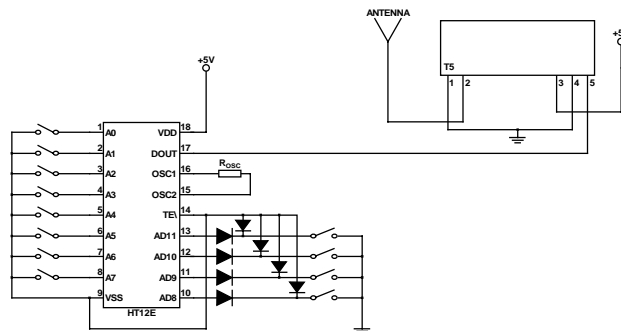

Electrical Characteristics: Transmitter 433,92 MHz

	pin	min.	Typ.	max.	units	notes
Transmitter						
Supply voltage	3	2.2	3/5	10.0	Volts	
Supply current	3	7.0		8.5	mA	1
RF power	2	2	5	5	mW	1
RF & Data						
2 nd harmonic			-50		dBc	2
Harmonics @ > 1GHz			-50		dBc	2
Initial frequency accuracy			±25		KHz	
Overall freq accuracy over -10 to +55 degC			±50		KHz	
Modulation bandwidth @ -3dB			20		KHz	
Power up time to full RF			5		mS	
Data rate				40000	bits/s	
Data pulse width		250			µs	

- Note 1:** measured into a 50Ω impedance
- 2:** the limit for the European spec EN 300 220 is -36dBm

Application Circuit

The application circuit shows how the XT5B transmitter can easily be integrated into a system to form a wireless link

Transmitter Application Circuit

Connection Details

Mechanical Dimensions

XT Transmitter

Pin Description:

RF GND (pin 1)

RF ground pin, internally connected to pin 4 (0V). This pin should ideally be connected to the nearest ground plane (e.g. coax braid, main PCB ground plane etc.)

RF OUT (pin2)

50Ω RF antenna output. To achieve best results the antenna impedance must match that of the module.

V_{CC} (pin 3)

+Ve supply pin. The module will generate RF when V_{CC} is present. It is strongly recommended that a 100nF capacitor decouples the supply rail as close as possible to this pin.

GND (pin 4)

Supply and data ground connection, connected to pin 1.

Data IN (pin 5)

This input has an impedance of 47KΩ and should ideally be driven by a CMOS logic drive or compatible. The drive circuitry should be supplied with the same supply voltage as the Tx module.

Application Information

Antenna Design

The design and positioning of the antenna is as crucial as the module performance itself in achieving a good wireless system range. The following will assist the designer in maximising system performance.

The antenna should be kept as far away from sources of electrical interference as physically possible. If necessary, additional power line decoupling capacitors should be placed close to the module.

The antenna 'hot end' should be kept clear of any objects, especially any metal as this can severely restrict the efficiency of the antenna to receive power. Any earth planes restricting the radiation path to the antenna will also have the same effect.

Best range is achieved with either a straight piece of wire, rod or PCB track @ ¼ wavelength (15.5cm @ 433.92MHz). Further range may be achieved if the ¼ wave antenna is placed perpendicular in the middle of a solid earth plane measuring at least 16cm radius. In this case, the antenna should be connected to the module via some 50 ohm characteristic impedance coax.

Helical Antenna

17 turns equally spaced
 Ø = 5mm (inside)

Whip Antenna

Antenna Configurations To Be Used With The XT5 Transmitter Modules

Features

- Miniature SIL package
- Single conversion FM Super-het using RF SAW and ceramic IF filtering at 10.7 MHz.
- Dynamic range better than 100dB
- Analogue, Digital and true RSSI outputs
- DATA RATES UP TO 64KBITS/S
- OPTIMAL RANGE 300m
- Operation on 433.92 MHz (Other frequencies possible)
- HIGH SENSITIVITY (-103 dBm)
- Very low current consumption (6mA)
- SINGLE 5V SUPPLY

Applications

- Telemetry systems
- Remote switching applications
- Paging systems
- Domestic and commercial security

General Description

The XR5LC miniature receiver UHF radio module enables the implementation of a reliable telemetry link at data rates of up to 64Kbit/s when used with one of the compatible X transmitter modules

Compatible Transmitter Modules

- XT5
- XT5B

The receiver is based on the classical superhet single conversion architecture utilising a PLL xtal referenced oscillator which yields a highly stable IF frequency (10.7 MHz). This hence allows use of high Q bandpass filters offering excellent adjacent channel rejection and hence high interference Immunity.

The XR5LC module will suit one-to-one and multi-node wireless links in applications including building and car security, remote industrial process monitoring and computer networking. Because of its small size and low power requirements, including a fast RSSI/CD, the module is ideal for use in portable battery powered wireless applications.

Ordering Information

Standard Product;

Part No	Description
XR5LC-434-5-20	20 Kbits/sec FM Receiver 433.92 MHz
XR5LC-434-5-40	40 Kbits/sec FM Receiver 433.92 MHz

Absolute Maximum Ratings: Receiver

Operating temperature:	-10°C to +55°C -40 to +80 deg C option available
Storage temperature:	-40°C to +100°C
Supply Voltage (pin 5)	7V
RF Input (pin 1)	+20 dBm (20mW)

Electrical Characteristics: Receiver (20 Kbits/sec version)

	pin	min.	typ.	max.	units	notes
DC LEVELS

RF sensitivity			-103		dBm	
IF Bandwidth			230		KHz	
Initial frequency accuracy			±22		KHz	
Max R.F. input			±20		dBm	1
E.M.C.						
Spurious responses upto 1GHz			<60		dB	
LO leakage, conducted			<60		dBm	
LO leakage, radiated			<60		dBm	
Image rejection			60		dB	
DYNAMIC TIMING						
Power up to stable data <i>(With RF signal present)</i>			30	35	mS	20 kbps
Signal to stable data <i>(With power supply already on)</i>		0.2		2.5	mS	20 kbps
				1	mS	40 kbps
Power up to valid RSSI <i>(with RF signal present)</i>		2		1	mS	All versions
Allowable data pulse widths (note 2)		50		6000	uS	20 kbps

Notes

- 1) IF bandwidth available down to 27KHz
- 2) The data slicer is optimised for a 50:50 duty cycle, hence for reliable communications, data should be encoded using a suitable scheme such as Manchester Encoding, although pulse width modulation up to 30:70 / 70:30 can be tolerated.

XR6LC Receiver

Application Circuit

The application circuit shows how the XR6LC Receiver can easily be integrated into a system to form a wireless link.

Receiver Application Circuit

Pin Description

RF IN (pin 1)

50Ω RF input from antenna, connect using shortest possible route. This input is isolated from the internal circuit using the air gap of the front end SAW RF filter.

RF GND (pin 2)

RF ground connection, preferably connected to a solid ground plane.

RSSI / Carrier Detect (pin 3)

The Received Signal Strength Indicator provides a DC output voltage proportional to the RF input signal. The amplitude of the RSSI voltage increases with increasing RF signal strength. A simple transistor interface can yield a carrier detect logic output.

Gnd (pin 4)

Connect to power supply ground

V_{CC} (pin 5)

+Ve supply pin. Operation from a 5V supply able to source 14mA at less than 10mV_{P-P} ripple.

AF (pin 6)

Audio frequency output

DATA OUT (pin 7)

CMOS compatible output. This may be used to drive external decoders.

RSSI Values

The XR6LC RSSI output provides a DC output proportional to the RF input signal. The table below shows the typical RSSI value depending on the RF signal strength.

RF Signal Strength / dBm	RSSI / V
-120	1.27
-110	1.37
-100	1.49
-90	1.74
-80	1.99
-70	2.3
-60	2.56
-50	2.63
-40	2.63
-30	2.53
